

Description

Our factory specializes in producing admixture in concrete, it has good adaptability in all kinds of concrete, we have the professional technical team, the price is competitive.

This water reducing agent has the functions of reducing water greatly, protecting slump, strengthening and so on. It is especially suitable for the preparation of high durability, high flow state, high protecting slump, high strength and high requirements for appearance quality of fair-faced concrete. There are early strength type, standard type, retarded type for selection.

characteristics

- 1. High water reduction effect, low dosage can achieve high water reduction rate, which can reach more than 25%.*
- 2, improve concrete workability, good workability, pumping performance.*
- 3. Good slump maintenance performance.*
- 4, high strength growth, increase the early strength development, improve the strength of concrete later.*
- 5. Stronger plasticization and dispersion of cement particles.*

6.Lower base content.

7.Increase the compactness of concrete and improve the appearance quality of concrete.

8.Concrete has good thixotropy and is easy to construct.

9.It is beneficial to improve the durability of concrete.
