Concrete Additives Retarder

Concrete Additives Retarder is a special polycarboxylate-based superplasticizer for dry mortar. It has a good adaptability with cement and other admixtures and has been widely used in non-shrinkage grouting material/mechanical grouting material, repair mortar, cement-based mortar, waterproof mortar, crack-sealer and polyphenyl granule thermal mortar, and other cement-based dry powder material.

Inspection merchandise.

1.High water reducing rate: Excellent dispersiveness and water reducing rate can attain 36% or above at saturated addition amount, which assures improving the working performance of the concretes, enhancing the concrete strength and saving cement application amount.

2.Good slump retention: Concrete Additives Retarder can well delay the transportation and on-site retention time of the concretes, assures the pumpable performance of the concretes.

3.High strength growth rate: Concrete Additives Retarder has higher early strength growth rate, can improve shrinkage pe

performance and reduce the carbonation rate of concretes.

4. Good adaptability: Concrete Additives Retarder has good dispersiveness and flowing retention ability to variety of silicate cements, common silicate cements, slag silicate cements and various admixtures. It has special adaptability to cements in south area with good cost performance.

5. Environment friend: Concrete Additives Retarder No formaldehyde and other harmful ingredients.

6. Low energy consumption and low cost: Polycarboxylate Based Superplasticizer Short reaction cycle, low energy consumption, and low cost. It is quite adaptable to commercial concrete mixing station.

Q: Does your product is dangerous merchandise?

A: Not dangerous merchandise, It belongs to Not legal
